How to Adjust the High DPI Settings When Using a 4K or Hi-Resolution Screen

It is possible when using a 4K or high-resolution display or laptop, you may need to adjust the High DPI scaling for best performance when using and viewing the URC Accelerator 3, TC Flex 2 and Complete Control Program programs.

This article details the steps required to adjust you laptop or PC for this situation. *Note: This articles details a Windows 10 OS installation*

Step #1:

Navigate to: *C:\Program Files (x86)\Universal Remote Control, Inc\URC Accelerator 3* as shown below:

(or...*URC Accelerator2/Total Control Flex 2/Complete Control Program*. This file path may vary based on the URC program you need to adjust).

Step #4:

Check the box for: **Override high DPI scaling behavior.**..

In the drop down for: Scaling Performed By: choose Application, System or System (Enhanced). In most cases, System (Enhanced) yields the best results but this may require some experimentation depending on your specific laptop or PC system configuration (see image below):

Choose the high DPI settings for this program.
Program DPI Use this setting to fix scaling problems for this program instead of the one in Settings <u>Open Advanced scaling settings</u>
A program might look blurry if the DPI for your main display changes after you sign in to Windows. Windows can try to fix this scaling problem for this program by using the DPI that's set for your main display when you open this program.
