

How to join a TRC-780 to the Network

Last Modified on 06/20/2016 11:39 am EDT

How to join a TRC-780 to your network via URC's 2.4 GHz RF

The TRC-780 is the only URC in-hand remote that uses URC's 2.4GHz RF technology to communicate natively with an MRX-10. All other in-hand remotes use WiFi. The pairing process to communicate with the TRC-780 requires an additional step. Follow the steps below to discover and assign a TRC-780.

1. **Hold down Main + Enter** at same time for **5+** seconds. this brings the remote to the user **Settings** screen.

URC

2. **Navigate** to page 3 of the **Settings** by using the **Nav-right** button on the right of the **Main** button.
3. Select the **"Join Network"** option. this puts the remote into **"Discovery Mode"**
4. In **Step 6: Network Settings/URC Devices**, the **TRC-780** appears in the **"Discover via MRX-10"** section. Click **Refresh** to discover the remote. Any TRC-780 remotes that are currently in "Discover Mode" are displayed on the right side of the screen. Use the unique MAC address to identify multiple remotes. Select the **TRC-780** and click **Assign**. This assigns the selected remote to the program.

5. Also note the TRC-780 requires a USB connection to download the programming.

TIP: If you can not discover the TRC-780 try highlighting it on the left and hitting the "clear" button or Delete on the keyboard. This officially clears out any old remote information.
