

3. Click the **Refresh** button

Room	Device	Mac Address	IP Address	Type	Refresh	Discovered:MRX-10	Mac Address	IP Address	Description
Equipment...	MRX-10 Master	00:00:00:00:00:00		DHCP	Assign				
Equipment...	DMS-1200	00:00:00:00:00:00		DHCP					
Living Room	TRC-820	00:00:00:00:00:00		DHCP					
Master Be...	TRC-1080	00:00:00:00:00:00		DHCP					

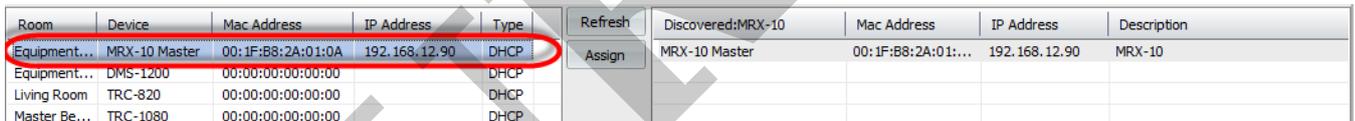

The **refresh** button uses the computer to start scanning the Local network. Assure that the computer is plugged into the same router/switch as the TC system and that all networking setup is correct. For more about networking, please see [Networking Settings in Total Control](#)

4. The right-side of the screen displays a list of all the available URC devices found during the discovery process. **Highlight the URC device to assign** and click **Assign**.

Room	Device	Mac Address	IP Address	Type	Refresh	Discovered:MRX-10	Mac Address	IP Address	Description
Equipment...	MRX-10 Master	00:00:00:00:00:00		DHCP	Assign	MRX-10(Unassigned)	00:1F:B8:2A:01:...	192.168.12.90	MRX-10
Equipment...	DMS-1200	00:00:00:00:00:00		DHCP					
Living Room	TRC-820	00:00:00:00:00:00		DHCP					
Master Be...	TRC-1080	00:00:00:00:00:00		DHCP					

Notice the Mac Address and the IP address display on the right side of the screen. If there are multiple of the same device, use the unique MAC address to identify them. There is a MAC address sticker on every URC device.

Room	Device	Mac Address	IP Address	Type	Refresh	Discovered:MRX-10	Mac Address	IP Address	Description
Equipment...	MRX-10 Master	00:1F:B8:2A:01:0A	192.168.12.90	DHCP	Assign	MRX-10 Master	00:1F:B8:2A:01:...	192.168.12.90	MRX-10
Equipment...	DMS-1200	00:00:00:00:00:00		DHCP					
Living Room	TRC-820	00:00:00:00:00:00		DHCP					
Master Be...	TRC-1080	00:00:00:00:00:00		DHCP					

URC always recommends a Static IP address for long term reliability in a TC system. To learn how to set a URC device to Static, please see, [Setting A URC Device to Static](#)

5. **Repeat** this process for all **URC Devices**. If devices are not assigned, they will receive a fail on the download.

Assigning an IP Address for a 3rd Party Device:

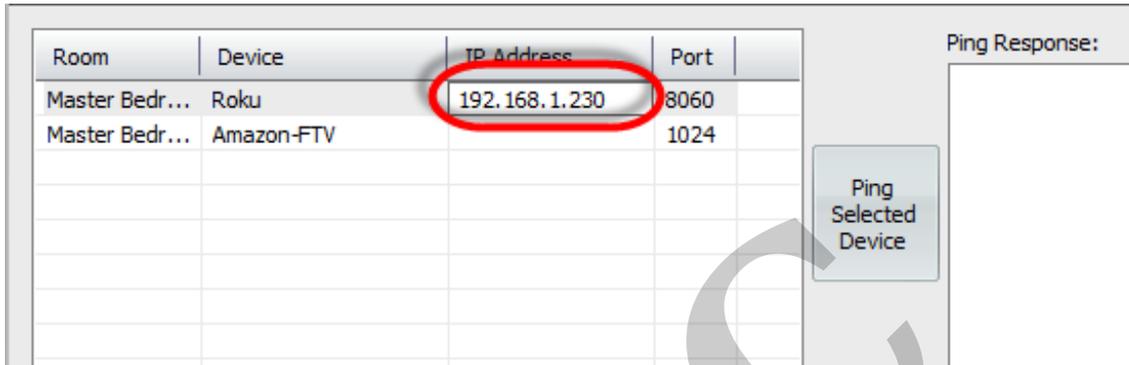

1. Click **Step 6: Network Setup** and go to the **Non URC Device** sub-step

2. The window displays a list of the **Non URC network devices**. For the Master System

Controller to communicate with these devices, the **MSC must know where they reside** on the **network**. It is recommended that 3rd party devices also have a Static address in the network. To set a 3rd party device to static, please see the owners manual for that specific device. If the device is a two-way module (sonos, nest) a static address can be utilized by creating MAC reservation in the router.

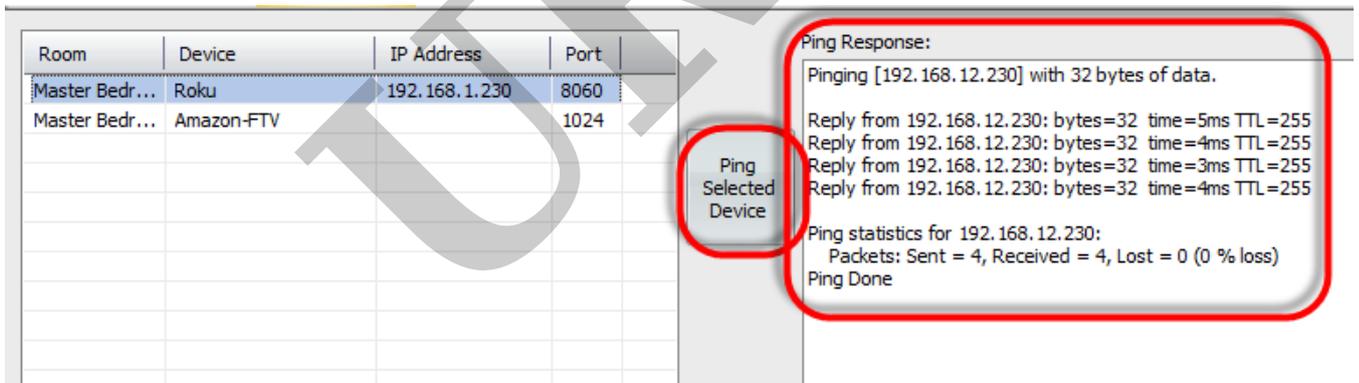

3. **Double-click** in the **IP Address** field, and **add the IP address of the specified device**

The screenshot shows a table with columns: Room, Device, IP Address, and Port. The IP Address field for the Roku device is highlighted with a red circle. To the right of the table is a 'Ping Response:' window and a 'Ping Selected Device' button.

Room	Device	IP Address	Port
Master Bedr...	Roku	192.168.1.230	8060
Master Bedr...	Amazon-FTV		1024

4. Optional, but the device can be pinged to assure that it resides on that IP address on the network. Click the **Ping Selected Device** Results can be seen in the window on the right

The screenshot shows the same table as above, but with the 'Ping Selected Device' button highlighted with a red circle. The 'Ping Response:' window is open, displaying the results of a ping test to the IP address 192.168.12.230.

Room	Device	IP Address	Port
Master Bedr...	Roku	192.168.1.230	8060
Master Bedr...	Amazon-FTV		1024

Ping Response:
Pinging [192.168.12.230] with 32 bytes of data.
Reply from 192.168.12.230: bytes=32 time=5ms TTL=255
Reply from 192.168.12.230: bytes=32 time=4ms TTL=255
Reply from 192.168.12.230: bytes=32 time=3ms TTL=255
Reply from 192.168.12.230: bytes=32 time=4ms TTL=255
Ping statistics for 192.168.12.230:
Packets: Sent = 4, Received = 4, Lost = 0 (0 % loss)
Ping Done
