How To Determine The Stream Number of Your Source

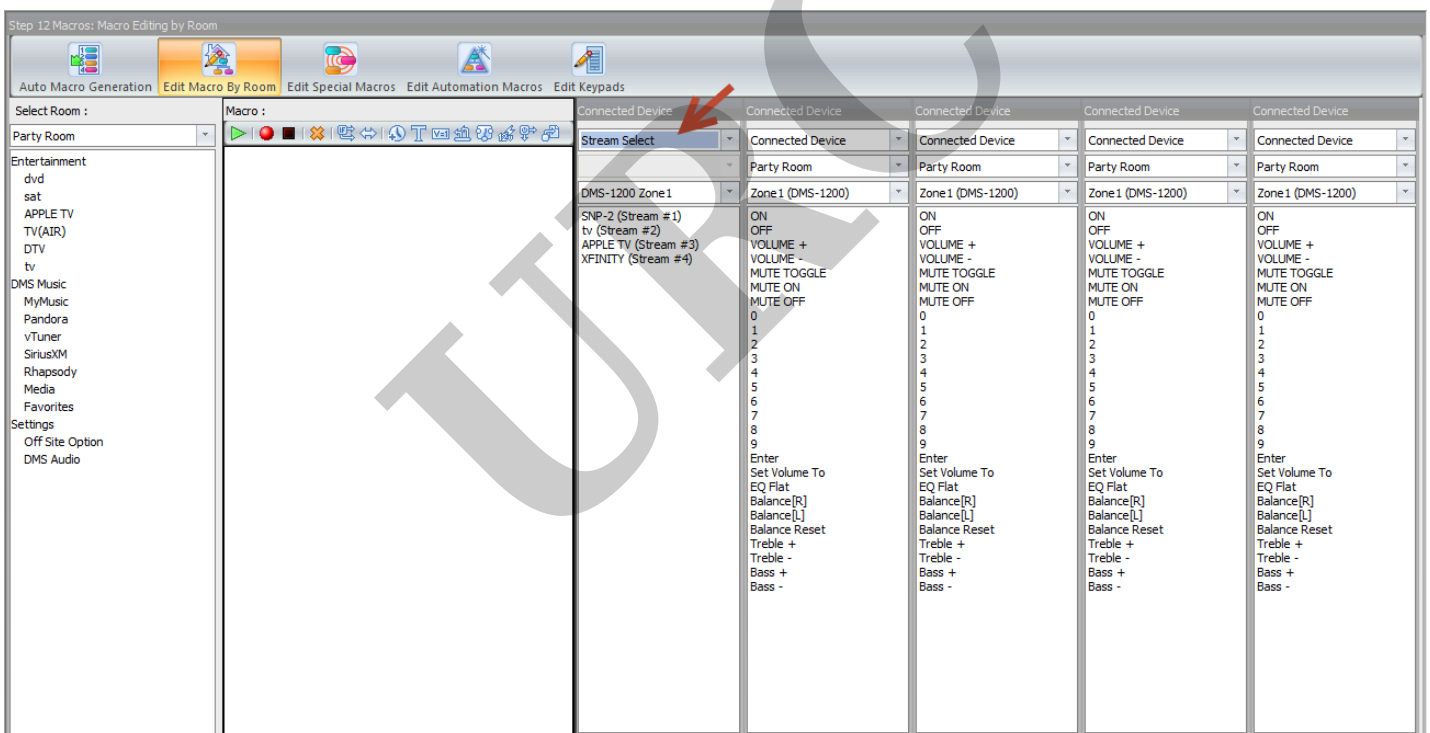

Last Modified on 05/10/2016 10:06 am EDT

The DMS Devices (DMS-AV/DMS-100/DMS-1200) all have a certain number of streams. All of the available streams can be selected when creating custom macros. The following depicts how to determine the stream number of your source as well as use it in a macro.

After the file has been correctly set up and accelerated, in **Step 12: Macro Editing/Edit Macro by room**, under Connected Device on the right hand side of your screen choose Stream Select. Every source connecting to the DMS units have a stream number.

Note:

Just because a source is physically connected to Input 1 does not mean its set to Stream # 1.
