

Controlling Apple TV With a Third Party Remote

Last Modified on 08/25/2016 3:58 pm EDT

Apple TV can be controlled with any third-party remote such as URC CCP MX-series remotes or event Total Control MRX-X base stations.

Apple TV has the capability to **learn** any IR code so that it can be used to trigger native commands.

1. On **Apple TV (4th generation)**, select **Settings**---->**Remotes and Devices**, select **Learn Remote**. On **Apple TV (2nd and 3rd generation)**, select **Settings**---->**General**---->**Remotes**, then select **Learn Remote**.
 2. Select **Start**. Icons for the six buttons on the remote appear on the screen. **Up** should be highlighted.
 3. Using the **third-party** remote, **press-and-hold** the button corresponding to the **Up button** until the blue **progress bar is full**. Apple TV automatically selects the next button to learn. Repeat this process to learn all commands required on the remote.
-

Please download this file. It is a premade Apple TV 4th Generation Driver created by an installer. This is NOT a certified URC Driver but has been known to work with an updated Apple TV.
