Enabling IP Control on Compatible Anthem Audio Devices

IP control on compatible **Anthem** audio devices needs to be enabled to allow integration with **Total Control**.

To enable IP control, locate the **Network Settings Menu** on the **Anthem** device and complete the following:

1. Enable **IP control**
2. Enable **Standby IP Control**
3. Note the device **Port Number** displayed in the menu.
4. Go to **Step 6-Network Setup** in Accelerator, select **Non URC Device** and locate the **Anthem** device. The default **Port Number** is set to 80 and must be changed.

Room	Device	IP Address	Port
Living Room	TV	192.168.0.149	10002
Living Room	ROKU	192.168.0.112	8060
Master Bedr...	ROKU	192.168.0.196	8060
Master Bedr...	Sonos	0.0.0.33	1400

Double click on the Port Number and change it to reflect the actual **Port Number**.

5. Save the modified file and **download** it to the controller.

6. **Wait for system to reboot**, then test for functionality.
