

# Using HDA Audio with a Netgear M4250-10G2XF-PoE+ Network Switch

Last Modified on 06/07/2024 12:08 pm EDT

URC HDA devices and software provide countless options to configure and optimize audio settings to achieve performance and flexibility for almost any application.

In most cases, the URC HDA-SW5 switch capacity is sufficient for most installations. However, if additional AVB ports are required the

**Netgear M4250-10G2XF-PoE+ Network Switch** can be used in a URC HDA audio system.

The following article details the required settings needed to use the Netgear M4250-10G2XF-PoE+ Network Switch with URC HDA Audio.

---

The Netgear M4250-10G2XF-PoE+Network Switch is an AVB-enabled switch (***with a purchased AVB license key***) that supports ten RJ45 ports and two SFP network ports for AVB steamed over fiber or additional SFP RJ45 ports.

This short guide defines the required settings needed to use the Netgear M4250-10G2XF-PoE+Network Switch with HDA Audio. This guide was written to get you started with using this switch with URC HDA Audio. Any other custom settings you set or change in the Netgear M4250-10G2XF-PoE+Network Switch are up to you and may affect the performance of HDA Audio.

***\*The Netgear M4250-10G2XF-PoE+ Network Switch is fully compatible with the URC HDA-SW5 AVB Network Switch.***

Note: Tested with HDA firmware v1492 (minimum required), HDA-SW5 firmware v148 (minimum required).

Testing with Netgear M4250-10G2XF-PoE+Network Switch firmware version 13.0.2.34 (minimum required).

---

## **Setting up the switch to use with HDA Audio**

1. Once you are logged into the switch, select the “Network Profiles” option.

2. Scroll down to “Configured Profiles” and select “Edit”.

3. Select “Profile Template”, then select the “Audio Video AVB” option.

The “Profile Name” will remain “Default.”

The VLAN ID will remain “1”.

“Edit VLAN Routing / DHCP Server” was left disabled. You may choose to change this if you are using this switch with devices using other streaming technologies.

## Profile Settings

Configure your profile settings and preferences.

Profile Name: Default

Profile Template: Data

- Audio AES67
- Audio Dante
- Audio Q-SYS
- Audio Video AVB
- Data
- Lighting
- Video

VLAN ID: 1

Edit VLAN Routing / DHCP Server

VLAN IP Settings: DHCP client

Subnet Mask: 255.255.255.0

4. Scroll up on the switch setup webpage and check all the ports on the switch. They should display a green checkmark.

Select the ports where this profile will apply. "Default"

1 2 3 4 5 6 7 8 9 10 11 12

Untag all

**Later**, you can adjust the AVB port assignments if you need to use another VLAN in the system.

Select "Apply".

Edit VLAN Routing / DHCP Server

VLAN IP Settings: DHCP client

Subnet Mask: 255.255.255.0

Audio Q-SYS

Audio Video AVB

Data

Lighting

Video

Cancel Apply

Once applied, the "Configured Profiles" screen shall display the "Default Profile" as "Audio Video AVB", on VLAN 1.

A dynamic "VLAN2" is automatically created by the Netgear switch to prevent conflicts with the "Audio Video AVB" profile on "VLAN1".

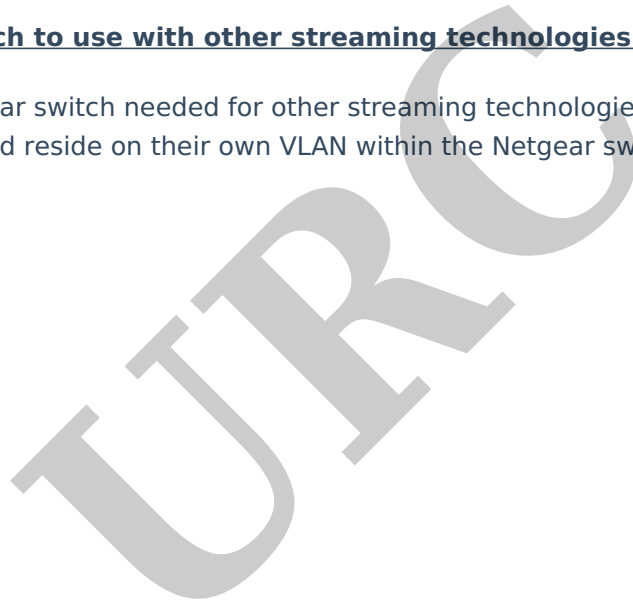

### Configured Profiles

Profile Name	Profile type	VLAN ID	IP Address	# of Assigned Ports
 Default	Audio Video AVB	1	192.168.1.204	12
 VLAN2	Dynamic	2	N/A	0

Total 2    10/page    < 1 >    Go to 1

### Setting up the switch to use with other streaming technologies

Any port on the Netgear switch needed for other streaming technologies like Dante, Q-Sys or video streaming should reside on their own VLAN within the Netgear switch, like the example shown below:

Untag all

LAG

### Profile Settings

Configure your profile settings and preferences.

Profile Name: Video

Profile Template: Video

VLAN ID: 10

Color: #1AD617

Edit VLAN Routing / DHCP Server:

VLAN IP Settings: Static

VLAN IP Address: [Empty]

Subnet Mask: [Empty]

DHCP Server: Off

Buttons: Cancel, Apply

### Configured Profiles

Profile Name	Profile type	VLAN ID	IP Address	# of Assigned Ports
Default	Audio Video AVB	1	192.168.1.204	10
VLAN2	Dynamic	2	N/A	0
Video	Video	10	N/A	2

Total 3 | 10/page | 1 | Go to 1

The Netgear switch supports templates for multiple streaming technologies that can be used when creating individual VLANs.

<b>Audio AES67</b> To connect IP Audio AES67 devices and their controller	
<b>Audio Dante</b> To connect IP Audio Dante devices and their controller	
<b>Audio Q-SYS</b> To connect IP Audio Q-SYS devices and their controller	
<b>Audio Video AVB</b> To connect IP Audio Video AVB devices and their controller.	
<b>Data</b> To connect PCs and other Control network devices.	
<b>Lighting</b> To connect sACN, Art-Net, and MANet lighting devices.	
<b>Video</b> To connect IP Video devices and their controller. Audio can be sent and received using another VLAN tag in another profile simultaneously. Supported devices include NVX, AMX, ZeeVee, Aurora, Kramer, Altona, LibAV, Visionary, Dante Video, SDVoE & etc.	

### Using the Netgear Switch PoE and PoE+ with HDA-IO and HDA-130 Amplifier

The Netgear switch can power the HDA-IO stream injector/receiver and the HDA-130 amplifier. Select the “Power Over Ethernet” option and “PoE Interface Settings” in the switch configuration tool.

The screenshot displays the Netgear switch configuration interface for Power over Ethernet (PoE). The left sidebar shows the navigation menu with "Power over Ethernet" selected. The main content area is titled "Power over Ethernet (PoE)" and shows the configuration for the M4250-10G2XF-PoE+ switch. A power consumption bar indicates 39W usage out of a 240W maximum. A row of 12 ports is shown, with ports 1 through 8 highlighted in blue, indicating they are selected for PoE. An orange arrow points to the "PoE Interface Settings" link in the top right corner. Below the power consumption bar, there is a "PoE Schedule" section with a "Create Schedule" link and a table with columns for Schedule Name, Date Range, Occurs, Time Range, and Status.

Select the ports requiring PoE and click Apply. For more information about other PoE settings, refer to the Netgear documentation for this switch.

## SFP Ports

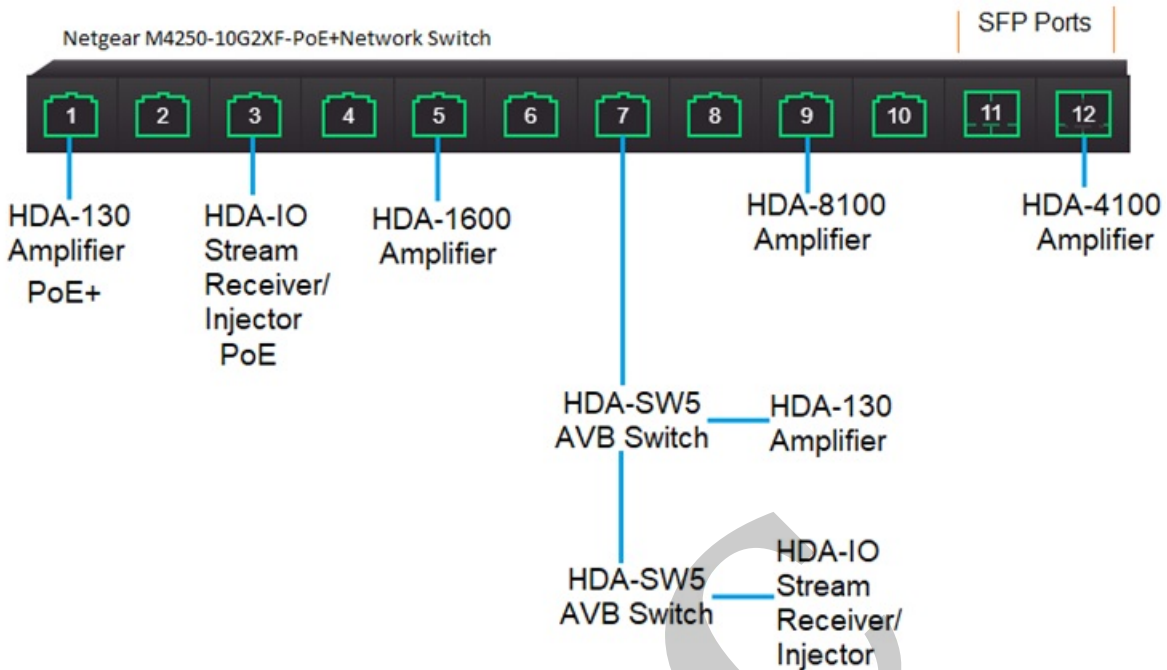

The SFP ports of the Netgear M4250-10G2XF-PoE+Network Switch were tested using SFP RJ45 adapters. No issues were found using this configuration.

*SFP adapters used for these tests:*

10Gtek Fiber SFP Adapters – product information [can be found here.](#)

The SFP Ports of the Netgear switch also support fiber SFP adapters.
